Zul Yatman

Senior Software Quality Assurance Engineer · SDET Architect · Distributed Systems & Performance Testing

Bandung, West Java, Indonesia
zoeltea@gmail.com · linkedin.com/in/zul-yatman · github.com/zoeltea · zoeltea.github.io/resume

SUMMARY

I build automated quality engineering frameworks and ensure high-concurrency systems run without failure in production. Over the past **10+ years** I have led software quality assurance, test automation architectures, distributed performance benchmarking, and core backend engineering across retail omnichannel, e-commerce, fintech, media streaming, and core banking systems in Indonesia.

Omnichannel retail systems and high-throughput marketplace integrations are my current focus. At **EIGER (PT Eigerindo Multi Produk Industri)** I spearhead quality engineering across omnichannel operations—architecting end-to-end automated validation for TikTok Shop order fulfillment migration from legacy UFFOS to the CARE platform with zero dropped orders, orchestrating distributed k6 performance testing for flash sales and voucher claiming spikes, and ensuring seamless data synchronization across POS, handheld store inventory ("Blind Counting"), and OMS platforms.

Prior to EIGER, I spent over four years at **Bukalapak**, progressing from **Lead QA / Test Engineer (2020 – 2023)** to **Senior Software Engineer in Fintech & Commerce Systems (2023 – 2024)**. On the QA leadership side, I built developer-facing test platforms including an automated HMAC signature generation tool that saved 150+ monthly engineering hours, slashed regression pipelines from 40 minutes to under 5 minutes using parallel container execution on Kubernetes, and established a self-service testing culture. In backend engineering, I developed the Dynamic Service Fee engine powering core revenue across web and mobile platforms, and optimized Lapakgaming reseller checkout APIs, cutting latency by 87.5% (40s down to 5s).

My earlier career includes developing cross-platform test automation for DRM video streaming at **Vidio**, instant messaging and wallet test automation at **BBM (BlackBerry Messenger)**, and ISO8583 banking switch transaction validation at **Aprisma**. I combine strong programming capability in Go, Python, Java, and TypeScript with advanced QA practices in performance and contract testing. I am open to Senior QA, Lead SDET, QA Architect, or Senior Software Engineering roles in high-scale distributed systems.

HIGHLIGHTS

- **10+ years** architecting automated test frameworks, systems resilience, and distributed performance testing across retail omnichannel, fintech, e-commerce, media streaming, and banking.
- **Architected parallel container test execution** on Kubernetes at Bukalapak, slashing full regression cycles from 40 minutes to under 5 minutes (85%+ runtime reduction).
- **Engineered distributed performance testing** suites using k6 integrated into CI/CD pipelines at EIGER, validating service throughput under 10,000+ RPM order surges.
- **Built developer-facing automation tooling**, including an HMAC signature generation module saving 150+ monthly engineering hours when testing secure banking APIs.
- **Drove core fintech engineering & optimization** at Bukalapak, engineering the Dynamic Service Fee engine and slashing Lapakgaming checkout API latency from 40s to 5s.

CORE COMPETENCIES

Area	Technologies & Practices
Languages	Go (Golang), Python, Java, JavaScript / Node.js, PHP, SQL, Bash / Shell
Test Automation & QA	Playwright, Cypress, Appium, Robot Framework, Postman / Newman, Selenium, TestNG, Contract Testing

Area	Technologies & Practices
Performance & Load Testing	k6 (Distributed Load Testing), Locust, JMeter, Concurrency & Bottleneck Analysis
CI/CD & DevOps	GitLab CI, Jenkins, Docker, Kubernetes, Test Containerization, Release Quality Gates
Databases & Messaging	PostgreSQL, MySQL, Redis (Caching / Locks), RESTful APIs, Microservices, Webhooks
Domains	Omnichannel Retail, E-Commerce, Fintech & Payments, Core Banking (ISO8583), Video Streaming (DRM / HLS / DASH)
Leadership	QA Architecture, Shift-Left Culture, Developer Enablement, Technical RFCs, Squad Quality Mentorship

PROFESSIONAL EXPERIENCE

PT Eigerindo Multi Produk Industri (Contracted by Digital Tech Asia)

Senior Software Quality Assurance Engineer · Jan 2026 – Present
Bandung, Indonesia (Hybrid)

Leading quality engineering architecture, automated test pipelines, and high-throughput reliability benchmarking across retail store systems and marketplace integration channels.

- **TikTok Shop Order Processing Migration (UFFOS to CARE):** Spearheaded end-to-end testing for the core migration of TikTok Shop order fulfillment from legacy UFFOS service to CARE platform. Partnered closely with BAs and developers to validate webhook reliability and order status synchronization, ensuring zero dropped orders during flash-sale spikes.
- **Distributed Performance Testing:** Designed and executed distributed load testing suites using k6 in CI/CD pipelines, validating service throughput and API resilience under 10,000+ concurrent RPM order generation scenarios.
- **Blind Counting Initiative (Retail Store Inventory):** Formulated comprehensive test scenarios ensuring absolute stock consistency across POS, store cashiers, and OMS without exposing stock quantities to field operators, facilitating rollout across 25+ retail outlets and reducing stock discrepancies by 42%.
- **Voucher & Coupon System Optimization:** Created k6 load testing suites to assess endpoint resilience during massive voucher claiming spikes, isolating system bottlenecks and establishing concurrency benchmarks for backend engineers.
- Stack: Go, Node.js / TypeScript, Redis, PostgreSQL, k6, Docker, Kubernetes, Robot Framework, Postman

Bukalapak

Jun 2020 – Dec 2024 · *4 years 7 months*
Bandung / Jakarta, Indonesia

Progressive technical leadership spanning test architecture, developer enablement tooling, and backend fintech calculation engines across transaction and payment tribes.

Senior Software Engineer (Fintech & Commerce Systems) · Oct 2023 – Dec 2024

- Developed and maintained the Dynamic Service Fee engine across Desktop, Mobile Web, Android, iOS, and Mitra Bukalapak, powering a core platform revenue stream.
- Engineered Cashback and Mix-Payment transactional mechanisms for the Lapakgaming platform.
- Optimized product retrieval and checkout APIs within Lapakgaming Reseller System, slashing latency from ~40s down to ~5s (87.5% reduction).
- Authored technical RFCs, architecture flowcharts, and sequence diagrams for new transactional features.
- Stack: Ruby on Rails, Go, MySQL, Redis Cluster, Kafka, gRPC, Datadog

Lead QA / Test Engineer · Jun 2020 – Apr 2024

- Re-architected core E2E testing framework with parallelized container execution on Kubernetes, slashing full regression pipeline time from 40 minutes to under 5 minutes (85% reduction).
- Built an internal developer-centric HMAC signature generation and payload tampering platform, saving 150+ monthly engineering hours for teams testing signed banking API webhooks.
- Stabilized and refactored flaky test automation suites across Android, iOS, and Mitra Bukalapak apps.
- Created automated Slack-integrated regression dashboards and failure triaging bots, reporting real-time smoke and regression status directly into squad deployment pipelines.
- Championed a self-service testing culture through hands-on workshops and documentation, mentoring 35+ engineers in authoring resilient contract and integration test suites.
- Stack: Go, TypeScript, Cypress, Playwright, Python, k6, Appium, Docker, Kubernetes, GitLab CI, Slack Bolt API

Gan Kapital

QA Instructor · Jun 2025
Jakarta, Indonesia

- Conducted specialized Test Automation training sessions for the company's internal engineering team.
- Delivered practical curriculum on test script authoring, troubleshooting flaky tests, and implementing automation best practices in enterprise environments.

Vidio & PT Kreatif Media Karya (KMK)

Test Engineer · Mar 2019 – Jun 2020
Jakarta, Indonesia

- Led quality assurance efforts for core Livestreaming playback and Video on Demand (VOD) services for 40M+ viewers.
- Developed cross-platform test automation suites using Python-based Robot Framework for Web, Android, and iOS.
- Integrated automated DRM-compliant playback verification suites into release pipelines, validating adaptive bitrate streaming fallback under degraded network conditions.
- Stack: Python, Robot Framework, Appium, Docker, HLS / DASH, Selenium, Jenkins

---

BBM (BlackBerry Messenger)

Senior Software Development Engineer in Test (SDET) · Jul 2018 – May 2019
Jakarta, Indonesia

- Developed and maintained large-scale mobile test automation suites leveraging Appium and Robot Framework for 60M+ users across Southeast Asia.
- Established continuous load testing frameworks evaluating chat server socket connections under high-concurrency connection storms.
- Configured Jenkins CI for recurring scheduled executions and practiced pair programming with development teams.
- Stack: Java, Appium, Robot Framework, JMeter, TestNG, Jenkins, Git

---

PT Aprisma Indonesia

Nov 2015 – Jun 2018 · *2 years 8 months*
Jakarta, Indonesia

Quality Assurance Engineer · Nov 2015 – Jun 2018

- Conducted functional, mobile/web integration, and direct database transaction verification for enterprise core banking systems.
- Verified ISO8583 interbank funds transfer message framing, transaction rollbacks, and ATM/EDC switch integrations.
- Authored Test Plans, Test Cases, release sign-off documentation, and Standard Operating Procedures (SOPs).
- Stack: Java, ISO8583, SQL / Oracle DB, SOAP / REST APIs, Linux

Java Developer · Aug 2015 – Nov 2015

- Built banking software modules using Java and resolved critical defects in backend services.

PT Sumber Data Persada

IT Specialist · Jul 2011 – Jun 2015

Bekasi & On-site, Indonesia

- Handled on-site deployment, configuration, and operational support for real-time monitoring software on oil & gas drilling rigs.
- Maintained and calibrated real-time sensor data telemetry servers with 99.9% uptime under demanding field conditions.
- Designed local automated database backup, failover, and data integrity verification scripts ensuring zero loss of drilling telemetry data.
- Stack: Linux / Unix Systems, Industrial Networking & Modbus, Satellite VSAT Telemetry, SQL, Bash

EDUCATION

Institution	Program / Focus	Period
Universitas Pasundan Bandung	Bachelor of Computer Science (S.Kom.), Informatics Engineering	2006 – 2012

LANGUAGES

- **Indonesian:** Native
- **English:** Professional working proficiency

ADDITIONAL INFORMATION

- **Work authorization:** Indonesia
- **Preferred domains:** Omnichannel Retail, E-Commerce, Fintech & Payments, High-Throughput Distributed Systems, Quality Engineering & SDET
- **Leadership scope:** Mentored 35+ engineers across QA and development squads; owned testing architecture across multiple tribes
- **Availability:** Open to Senior QA / Lead SDET / QA Architect / Senior Engineering roles
